

NORTHWIND ADDITIVE · CAPABILITY STATEMENT

CORE COMPETENCIES

Mobile gantry 3D concrete printing for expeditionary and disaster-recovery construction. Rapid-cure binder chemistry formulated for field temperatures from -5 to 45 degrees Celsius. Printed structural forms reach 28-day design strength in under four hours of cure at ambient conditions.

DIFFERENTIATORS

Two issued patents on nozzle geometry (US 11,842,331 and US 12,004,918) covering variable-aperture extrusion that maintains bead consistency across a 40-to-1 flow range. No competitor prints structural wall sections without formwork at this rate.

PAST PERFORMANCE

Ohio Third Frontier TVSF Round 43 · printed a 900 square foot barracks shell in eleven hours at Camp Perry, meeting all ASTM C1314 compression requirements. Delivered on schedule and 12 percent under the awarded budget.

FACILITIES

18,000 square foot fabrication and test facility in Dayton, Ohio, including a climate-controlled cure chamber and a 20-tonne materials handling bay.
