

Facilities and Equipment

Aerivio Systems maintains a 3,200 sq ft engineering facility with a dedicated acoustics bench and an anechoic test enclosure sufficient to conduct all Phase I bench work in-house.

Figure 1. Aerivio headquarters and acoustics laboratory (illustration).

Key Equipment

- 4-channel calibrated hydrophone array
- Anechoic test enclosure (custom)
- 2-watt edge compute development kits (×6)
- On-premises GPU training cluster (8× accelerators)
- Calibrated power-measurement bench for rail-level draw

Test Environment

At-sea data collection is conducted under an existing partnership with a regional marine research station, providing access to representative acoustic conditions *without additional Phase I cost*.
