

Contribute to a Proposal, Scoped to You

You were invited to help on one proposal. This guide is your complete manual: accept the invite, find your assigned sections, contribute in the canvas, comment, move files, and understand exactly what each grant unlocks.

Collaborators are stage-scoped — you see exactly what you were invited to, and nothing else.

Scoped access · every control your grant unlocks, and every boundary

Orientation — a scoped collaborator

WHERE invite email → /portal/<company>/proposals

You've been invited to help on one proposal at one company. This guide is your whole world in the platform: what you can open, how you contribute, and where your assignments live. Collaborators are **stage-scoped** — your access is granted per section and per permission (view, comment, or edit).

There are two kinds of invite. An **External** invite makes you a **partner_user** — the scoped collaborator this guide covers. A **Contributor** invite makes you internal staff (tenant-wide). If you see the full company sidebar, you were invited as a Contributor; if you see only **Proposals**, you're an External collaborator.

The collaborator landing — scoped to the work you were invited to.

Accept your invite & sign in

WHERE `/invite/<token>` → `/change-password` → the proposal

Your invite arrives as a deep-linked email from the company that wants your help.

A revoked invite shows “*This invitation is no longer valid.*” An already-used one shows **Invite Already Accepted** with a **Go to Login** button. First sign-in on a fresh account asks you to change your temporary password before anything else.

- 1 Follow the email link to `/invite/<token>`. The **Accept Invitation** page names the inviter, the proposal, the company, and your email.
 - 2 Set a **Password** (at least 12 characters) and **Confirm Password**, then **Set Password & Accept**. You're dropped straight into the proposal workspace.
 - 3 If you're an existing user, you're auto-accepted and the email links you straight to the proposal — no password step.
-

Your landing — only your assigned work

WHERE `/portal/<company>/proposals`

Unlike a customer admin, your home is the **proposals list scoped to you**. The sidebar shows only **Proposals** (plus the notification bell and Sign out) — no dashboard, pipeline, library, or billing.

Navigating to a company screen you're not scoped for (dashboard, library, buckets, billing) simply redirects you back to **Proposals**. Nothing breaks — you're gently kept in your lane.

1 Open the proposal you were invited to. Inside, the workspace defaults to the **My Sections** tab — the sections assigned to you, each with a permission pill (edit / comment / view).

2 If nothing's assigned yet, you'll see *"No sections are assigned to you yet."* until an admin adds you.

The scoped landing — the proposals you're invited to, and only those.

Inside the proposal — your view

WHERE `/portal/<company>/proposals/<id>`

The proposal workspace, scoped to you, is organized into what you can act on.

The **Contributor View** groups your work: **My Assignments** (or **Shared With Me** for externals) — the sections you can edit, each with a status badge, page progress, and **Open Editor** →; **My Dropbox** — your private file drop for this proposal; **Add content** — offer a document into the company library; **Sections (Comment Only)** with **View & Comment**; and **Other Sections (View Only)** with **View**. A **Timeline** tab shows the proposal's activity feed.

- 1 Open a section you can edit and work in the same **canvas editor** the customer uses — headings, text, lists, tables, images as structured nodes.

The screenshot displays the ImmoAdmin interface. On the left is a dark sidebar with a menu including Dashboard, Opportunities, Buckets, Library, Builds, **Proposals** (highlighted), Processes, Activity, Team, Documents, Billing, AI Usage, Automation, and Settings. The main area shows a proposal titled "Description of Proposed Phase I Technical Effort" with a status badge "empty". Below the title are "Export .docx" and "Export .pdf" buttons, and a "read-only" label. The central canvas is a large white area with a faint "EMPTY" watermark and text indicating it's an empty document. On the right is a "YOUR TOOLBOX" panel with buttons for "Review", "Modify", and "Lock", and a "Compliance & Status" section. Below this is a "DOCUMENT STATUS" table showing Status as "empty", Atoms as "0", and Version as "v1". A "COMPLIANCE" section shows Length as "0 / 9450 words" and a "15-page limit - ~9000 word target". The "Font" is "Times New Roman 10pt" and "Margins" are "1" all. A "CONTENT SOURCES" section is also visible.

The canvas editor — your contribution surface (per your edit grant).

- 2 Your edits save to the shared draft. The section owner reviews and, when it's right, **Accepts & Locks** it — that's an admin action; your job is to get the content right and save.

Inside a proposal — your assignments, dropbox, and the activity timeline.

Your permission matrix

WHERE view · comment · edit

Everything you can do flows from your grant on a section. Here is exactly what each level unlocks — this is the single most useful reference in this guide.

* A **view** collaborator can resolve a comment on a section they can see, but their comment *posts* are rejected. Accepting/locking, advancing stages, and exporting the whole proposal are always admin-only — a collaborator’s contribution ends at **Save + comment**.

What view / comment / edit unlock

Control	Edit	Comment	View
Edit canvas nodes (type, drag, reorder)	✓	—	—
Formatting toolbar + insert blocks	✓	—	—
+ From Library (insert atoms)	✓	—	—
AI Revision panel	✓	—	—
Undo / Redo · Save	✓	—	—
Add / reply to comments	✓	✓	—
Resolve a comment	✓	✓	✓*
Read the section (read-only)	✓	✓	✓
Compliance / History / Review tabs	✓	✓	✓
Export the section (after first lock)	✓	✓	✓
Accept & Lock · advance stage · manage team	—	—	—

Comment & suggest

WHERE section canvas → Node / Review tab

Comments are how you contribute without changing the draft directly. They thread per section (surfaced in the **Node** tab when a node is selected, and in the dedicated **Review** tab).

Resolving is one-way (there's no un-resolve), and comments can't be edited or deleted — so post a fresh comment to add or correct something.

- 1 Type in **Add comment...** and press Enter or click **Add**. A “reply” is simply another comment on the same section thread.
- 2 Click **Resolve** (on a human comment) or **Dismiss** (on an  **AI Review** item). Resolved comments collapse under a **Show/Hide N resolved** toggle.

Files — dropbox & add content

WHERE section workspace → My Dropbox · Add content

Two ways to move files.

My Dropbox is your **private** per-proposal file drop — you see only your own files (delete your own with the ✕). **Add content** lets you offer a document into the company library: drop a file and it's atomized (*“Atomized N files into M atoms. Review in Library.”*). The upload works even though the Library link itself is out of your scope — an admin reviews what you contributed.

Uploads are blocked once the proposal is locked (you'll get a clear message). Before the first lock, section export is also unavailable (*“Downloads available after final review and lock”*).

Collaboration vaults (“nooks”) — your shared workspace

WHERE `/vaults`

A **nook** is a private, segregated workspace between you and a customer — a place to hand content back and forth without either side seeing the other’s wider library. It is separate from proposal collaboration: if a customer invites you into a nook, you reach it at **/vaults** (the platform routes you there automatically at sign-in when you have no proposal assignment). You see **only** the nook(s) you were invited to — never the customer’s main library, and never another partner’s nook.

When you add content, the customer is notified and a review task is raised on their side — they decide what (if anything) to pull into their proposal. Only add content you’re comfortable with the customer using.

A nook is deliberately quiet: no main-library clutter, no other partners. Everything you add stays scoped to that one customer relationship.

- 1 Sign in. If your only access is a nook, you land on **/vaults** — a simple list of the customer(s) you collaborate with. Click **Open nook** → to enter.

Your /vaults list — only the customer(s) you collaborate with.

- 2 **Add an artifact** — name it, pick its form (Document · Deck · Sheet · PDF), and add it. Your upload is atomized into the nook (it is *invisible* to the customer’s main library until they choose to harvest it).
- 3 **Download** a whole artifact in any format (.docx · .pptx · .xlsx · .pdf). You can download **whole** artifacts only — pulling out individual sections is a customer-side action.

What you can do in a nook

Action	Collaborator (you)	Customer (owner)
Upload & atomize an artifact	✓	✓
Download a whole artifact	✓	✓
Download an individual section / atom	—	✓
Harvest content into the proposal library	—	✓
Invite / remove members, close the nook	—	✓

Collaboration

Sign out

← All vaults

Immobileyes

A segregated collaboration vault — upload your content here; the customer will review and use it for the proposal.

Artifacts (2)

Acme sensor spec sheet

.docx .pptx .xlsx .pdf

foundation

Immobileyes capability statement

.docx .pptx .xlsx .pdf

foundation

+ Add artifact

You can download whole artifacts; the customer harvests individual sections into their proposal.

2

Your nook — a dedicated Collaboration surface (no customer nav, no other partners). Download whole artifacts, add your own; the whole-only note sits at the foot of the list.

Scope boundaries — what’s out of reach

WHERE redirects / access checks

By design, a collaborator can't see the company's book of business. This keeps their pipeline, library, and billing private while still letting you do the work you were brought in for.

Access is a living grant. An admin can widen it (view → comment → edit), narrow it, or **revoke** it. If your access ends, your collaborator membership at that company is cleanly removed — without touching any other company you collaborate with. Re-inviting a revoked email restores the same record with fresh grants.

Where the boundaries are

You try to open	What happens
Dashboard · Opportunities · Buckets · Library · Builds · Processes · Activity · Team · Documents · Settings	redirected to Proposals
Billing · AI Usage · Automation	redirected (admin-only)
A section you weren't assigned	not found — you can't even open it by URL
An edit on a comment/view section	rejected server-side (403) even if you forge the request

Your lifecycle & states

WHERE invite → accept → contribute → (revoke)

A quick reference for where you stand at any moment.

Your contribution is real work the team depends on — draft and comment your assigned sections, keep your dropbox current, and the admin carries it across the finish line by accepting and locking.

Collaborator states

State	What you see
Pending	invite sent, not yet accepted — the /invite link is live until used or revoked
Empty assigned-work	accepted but nothing assigned yet — “No sections are assigned to you yet.”
Active with grants	only your assigned sections at your granted permission, plus dropbox & add-content
Locked proposal	the review/locked banner; saving & uploading pause; export of your sections opens after the first lock
Revoked	access ends immediately; the invite link reads “no longer valid.” Re-invite restores it

gowwin — RFP Pipeline Portal · Collaborator role. Your access is granted per proposal by that company’s admin and can be adjusted or revoked at any time. Companion guides: Customer-Admin, RFP-Admin Operations.
