

Facilities and Equipment

Aerivio Systems maintains a 3,200 sq ft engineering facility with a dedicated acoustics bench and an anechoic test enclosure.

Figure 1. Aerivio headquarters and acoustics laboratory (illustration).

Key Equipment

- 4-channel calibrated hydrophone array
- Anechoic test enclosure (custom)
- 2-watt edge compute development kits (x6)
- GPU training cluster (on-prem, 8x)

Test Environment

At-sea data collection is conducted under an existing partnership with a regional marine research station, providing access to representative acoustic conditions without additional Phase I cost.
